Saudi Arabia

Dear Andrey,

It is my privilege to notify you that by decision of the SEG Honors and Awards Committee and the SEG Board of Directors you have been selected to receive the Society's Reginald Fessenden Award.

The Reginald Fessenden Award is given to a person who has made a specific technical contribution to exploration geophysics, such as an invention or a theoretical or conceptual advancement which merits special recognition. Recognition is for your substantial contributions to interferometry theory, imaging and monitoring with virtual sources below a complex near surface which have impacted many processing and acquisition applications.

Official recognition of your award will take place during IMAGE in Houston, Texas, USA, 28 August – 1 September 2023. Additional details regarding the day and time will be sent closer to the event.

In preparation for this occasion, please invite someone to prepare a written citation for publication in the program booklet and subsequently in *The Leading Edge*. Please complete the attached information sheet and return it to Mandi Duckworth by email ([mduckworth@seg.org](mailto:mduckworth@seg.org)) by **15 May**. To meet the program booklet production deadline, your citation must be received by **1 June**. We will contact the person you select to write your citation concerning its preparation as soon as you notify us. We will also need a recent photo of you by the **1 June** deadline. In order to maintain continuity throughout the program book, we are requesting a hi-resolution TIF or JPG digital photo of you in business attire. Please send your photo to Mandi. If you have any questions, feel free to contact Mandi at the email address listed above.

On behalf of the Society, congratulations on being selected to receive the Reginald Fessenden Award. Your important contributions to the sciences and our profession are greatly appreciated.

Regards,

A handwritten signature in black ink, appearing to read 'Ken Tubman', written in a cursive style.
